

Sovereign AI · AI Cloud

Private AI in your own cloud account

AI Cloud puts a chat workspace, open-weight models and connections to your internal data inside a cloud account or Kubernetes cluster you control. Your staff sign in through your identity provider, and Clover Tech keeps no credentials or access after install.

What runs where

Every seat includes

Security and control

- ✓ Single sign-on through SAML or OIDC, SCIM provisioning, roles and audit logs, all kept in your account
- ✓ Controls documentation aligned to SOC 2
- ✓ Zero data retention at Clover Tech, and conversation retention set by your admins
- ✓ Spend controls: per-user metering, monthly and daily caps and a per-agent kill switch In development

Models

- ✓ Two open-weight models, plus Claude or GPT on your own vendor key with no Clover Tech fee
- ✓ Automatic routing of routine work to open-weight models and harder tasks to frontier models In development

Workspace

- ✓ The workspace, with projects that switch between models per chat
- ✓ Agents with instructions, file search and code execution
- ✓ Three RAG connections, each to one internal data source

Support and reporting

- ✓ Standard support, covering installation, production issues and model updates
- ✓ A usage dashboard that reports by team, with a minimum group size In development

Add-on products

Clover Code Available VS Code in the browser, connected to an open-weight coding model in your environment. Price +\$5 per developer a month	MCP server Available Lets an AI tool such as Claude Desktop or Cursor deploy Clover Tech Marketplace apps in your account. Clover Tech never holds its keys. Price \$1,000 a year	Agent payments In development Agents pay in USDC on Base or Solana, or Bitcoin over Lightning, within limits you set. Keys stay in your account. Price \$1 per 1,000 payments, plus \$6 a month per BTCPay node

Specifications

Deployment	Your cloud account, on a VM, a container host or your own Kubernetes cluster. The installer needs a bare machine with SSH.
Regions	Every provider in the install wizard, in the large majority of each provider's regions, EU included.
Identity	Single sign-on through SAML or OIDC is required for every user, with SCIM provisioning and roles.
Audit and logs	Audit logs stay in your account, and logs forward to your MSSP.
Vendor access	None after install. Clover Tech holds no credentials, support works from operational logs and monitoring, and your team applies each upgrade Clover Tech signs.
Data flow	Documents, conversations and audit logs stay in your account. Prompts to the bundled models pass through a model gateway Clover Tech hosts until the next release moves it into your account. Clover Tech receives operational logs and monitoring results only. Claude and GPT traffic on your own vendor key goes to that vendor.
Retention	Zero data retention at Clover Tech. The model gateway writes no prompt or completion to any log, trace, crash report or cache, and operational logs carry no prompt or completion content. Your admins set how long conversations are kept in your account. Claude and GPT traffic follows your agreement with that vendor.
Models	Two open-weight models from families such as Llama, Qwen, Mistral and Gemma, served by vLLM or Ollama. Claude and GPT run on your own vendor key, and that traffic goes to the vendor.
Compliance	Controls documentation aligned to SOC 2 in every deployment. Mapping to another framework, starting with GDPR, is an add-on.
Support	Standard support is included. Priority and 24 × 7 levels are add-ons, and every level commits to a response time.

Questions buyers ask

Why not use the AI team plan we already pay for?

On a team plan, every prompt goes to the vendor, and retention and export controls usually sit on enterprise tiers. In AI Cloud, conversations and audit logs stay in your account, kept as long as your admins set. The seat matches a Claude Team or ChatGPT Business seat at \$20 a month billed annually. Those plans include model usage, while AI Cloud runs on compute you pay your provider for.

Are open-weight models as good as Claude or GPT?

Not quite. Epoch AI measured open-weight models trailing the best closed models by about four months on average in 2026. Claude and GPT stay available when you elect them, and you choose which models your staff can use.

What does compute cost?

Your cloud provider bills it to your account. One NVIDIA L40S on AWS serves both included models for up to about 50 users, an estimated \$12,300 to \$16,300 a year. The price list estimates compute for each example configuration.

Who installs and maintains it?

Your team runs the setup wizard, and Standard support covers installation, so no ML platform team is needed. Clover Tech prepares, tests and signs each upgrade, and your team applies it.

Does any of our data reach Clover Tech?

Prompts to the bundled models pass through a model gateway Clover Tech hosts today, and the next release moves that gateway into your account. The gateway runs under zero data retention (ZDR): it writes no prompt or completion to any log, trace, crash report or cache. Documents, conversations and audit logs stay in your account, and your admins set how long conversations are kept. Clover Tech receives operational logs and monitoring results, which carry no prompt or completion content, and has no access to your cloud account after install. Prompts you send to Claude or GPT on your own vendor key go to that vendor, and your agreement with Anthropic or OpenAI sets how long that vendor keeps them, including any zero data retention terms you sign with them.

Do our staff need a new chat tool?

Today they use the workspace in a browser. A Slack app, then Microsoft Teams, is in development.

In development

Ask us for current timing on these and on the items marked in development elsewhere in this overview.

- ☐ Model gateway inside your account, in the next release
- ☐ Claude and other frontier models through Amazon Bedrock in your account
- ☐ Shared team projects
- ☐ Audit feed from your account into your SIEM
- ☐ Agent registry listing every agent and app that is running
- ☐ A Slack app, then Microsoft Teams
- ☐ An EU region for each model

RAG connection catalog

Three connections come with every deployment, and each additional data source is \$1,000 a year. Connectors become available as each one is certified, so ask which are certified today.

Documents

SharePoint, Google Drive,
Box, Dropbox, Confluence,
Notion

CRM and deal flow

Salesforce, HubSpot,
Dynamics, Affinity

Data and warehouse

Snowflake, BigQuery,
Databricks, Postgres, S3

Security

Splunk, Elastic, Sentinel,
Wazuh, CrowdStrike

Communication
